

The Statistical Society of Australia Inc

Regulations

(Adopted July 2004)

1. Sections

1.1 The Society has established special interest Sections in the following areas of statistical endeavour:

- (i) Statistical Computing;
- (ii) Survey and Management Statistics;
- (iii) Statistics in the Biological Sciences;
- (iv) Statistics in the Medical Sciences;
- (v) Statistical Education;
- (vi) Industrial Statistics;
- (vii) Young Statisticians;
- (viii) Bayesian Statistics

The Society may establish other Sections from time to time.

1.2 Each Section fosters activities in its area of interest by such actions as:

- (i) providing news of relevant activities to the Newsletter and to Branches;
- (ii) organising a segment of a Society Biennial Conference, subject to the agreement of the Programme Committee;
- (iii) organising a conference for that Section's members;
- (iv) conducting joint activities with other Societies.

1.3 Each Section is responsible to the Central Council through a Chairman who will be elected annually by the Annual General Meeting of the Society.

1.4 The President shall invite one of the Section Chairmen to each meeting of Central Council, as an observer.

1.5 The administrative structure of the Section is the responsibility of that Section.

1.6 Membership of a Section is open to all members of the Society and is obtained by requesting it at the time of paying for membership of the Society each year.

- 1.7** The Chairman of a Section shall receive the agendas and minutes of Central Council meetings.
- 1.8** Proposals for major activities in a Section shall be presented to the Central Council for comment and approval.
- 1.9** The Central Council may authorise the payment of grants to a Section.
- 1.10** The Central Council may authorise a loan to a Section to meet expenses incurred in advance of an activity (e.g. a conference) being organised by that Section. Where activities are organised with another Society, agreements with that Society as to the sharing of surplus or deficit shall be agreed and approved in advance by Central Council. All Section surpluses or deficits shall return to Central Council.
- 1.11** Non-members of the Society who participate in an activity organised by a Section shall pay a fee equal to the fee for members plus an additional fee where appropriate.
- 1.12** At the end of each year each Section shall present an Annual Report, including a financial statement, to the Central Council, which may require that the financial statement be audited.
- 1.13** Council may choose to disband a Section either:
- (i) on the recommendation of the Section; or
 - (ii) if the Section is deemed by the Council to have been inactive for at least four years, and to be no longer viable as a special interest Section of the Society; or
 - (iii) if the Section has persistently refused or neglected to comply with the provisions of these Rules and Regulations, or has persistently and wilfully acted in a manner prejudicial to the interests of the Society or to the statistical profession.

2. Guidelines for Council sponsorship of students to SSAI conferences

- 2.1** Council will normally sponsor honours or postgraduate students to attend the biennial Australian Statistical Conferences and the biennial specialist conferences which are held in alternating years. Sponsored students will normally be full-time postgraduate research students.
- 2.2** Up to two students will be sponsored from NSW and Victorian Branches, and up to one from the remainder. If, in any particular year, a Branch wishes to make a case for more than its quota, this case

should be made to the Council meeting preceding the conference.

- 2.3 Preference will be given to (student) members of SSAI. Sponsorship will be granted only where it is felt that the sponsored students will benefit.
- 2.4 The Branches are responsible for choosing the sponsored students and providing them with the information they need, and for notifying both the secretary and the conference secretary of the names of the sponsored students.
- 2.5 Each sponsorship is to consist of registration, standard accommodation and travel allowance. The travel allowance will be determined by the Executive six months prior to the conference.
- 2.6 The sponsored students are responsible for submitting a conference registration form and arranging their accommodation. Their registration fees will be waived and be taken from the Central Council's conference float; their accommodation will normally be paid by the conference, again coming from the Council's conference float, unless the accommodation provider is not agreeable to payment by the conference instead of the individual. The branches will be recompensed for the students' travel by Council.
- 2.7 The sponsored students will forward a brief written report on their conference experience to the next Council meeting after the conference.

3. Support for attendance at Council meetings and SSAI conferences

- 3.1 The Society shall pay for the fares (at most economy airfare), accommodation and incidental expenses to enable members of the Executive to attend Council meetings where attendance would otherwise be precluded.
- 3.2 The Society shall pay for the fares (at most economy airfare), accommodation and incidental expenses to enable one Branch member to attend Council meetings where the Branch could otherwise not be represented at the meeting. This representation will not include the President, Secretary or Treasurer of Central Council.
- 3.3 Where the President is required to participate in the biennial Australian Statistical Conference to present SSAI awards and the Presidential Address, and where sponsorship is unavailable from elsewhere, the Society shall sponsor the President to the extent of registration fees, travel expenses (at most economy airfare), accommodation and

incidental expenses.

4. Code of Conduct

4.1 Introduction

The overall objective of the Statistical Society of Australia Incorporated (SSAI) and its branches is to further the study and application of statistical theory and methods in all branches of learning and enterprise. In general, the public has no ready means of judging the quality of professional service except from the reputation of the provider. Membership of an association of professionals, such as the SSAI, will often be taken by the public as an assurance of ability and integrity. It is therefore essential that the highest standards are maintained by all members of the SSAI whenever they are acting professionally and whatever their level of qualification. In common with professional bodies in other fields, the Society has formulated its own rules as a Code of Conduct to define the behaviour expected of Society members practising in everyday professional life. This code of conduct has been drawn up to reflect the standards of conduct and work expected of all practising statisticians. It is a guideline for all members of the SSAI and is mandatory for all accredited members.

4.2 Authority

The authority for the SSAI Code of Conduct derives from its formal adoption by the SSAI at the AGM of 7 July, 1998. The Society binds itself to observe the principles of the code.

4.3 Rules of Professional Conduct

As an aid to understanding, these rules have been grouped into the principal duties which all members should endeavour to discharge in pursuing their professional lives.

4.3.1 The Public Interest

- (i) Members shall ensure that within their chosen fields they have appropriate knowledge and understanding of relevant legislation, regulations and standards and that they comply with such requirements.
- (ii) Members shall in their professional statistical practice have regard to procedures designed to ensure the highest ethical standards. In particular, members shall ensure that the collection of information and the publication of results shall observe relevant privacy laws.
- (iii) Members are encouraged to advance public knowledge and understanding of statistics and to counter false or misleading statements. Members shall not make any public statement in their professional capacity unless competent to do so and, where appropriate, authorised to do so.

4.3.2 Duty to Employers and Clients

- (i) Members shall carry out work with due care and diligence in accordance with the requirements of the employer or client and shall, if their professional judgement is overruled, indicate the likely consequences.
- (ii) Members shall not disclose or authorise to be disclosed, or use for personal gain or to benefit a third party, confidential information acquired in the course of professional practice, except with prior written permission of the employer or client, or at the direction of a court of law.
- (iii) Members shall declare any interests, financial or otherwise, which could be perceived as influencing the outcome of work undertaken for a client or employer.
- (iv) Members should try to prevent the use of any misleading summary of data in their name. They should ensure that full disclosure is made of all assumptions and caveats.

4.3.3 Duty to the Profession

- (i) Members shall uphold the reputation of the Profession and shall seek to improve professional standards through participation in their development, use and enforcement, and shall avoid any action which will adversely affect the good standing of Statistics and Statisticians.
- (ii) Members shall not speak in the name of the Society without the authorisation of the Executive Committee of the Society.
- (iii) Members shall encourage and support fellow members in their professional development and, where possible, provide opportunities for the development of new entrants to the Profession.
- (iv) Members shall act with integrity towards fellow statisticians and to members of other professions with whom they are concerned in a professional capacity, and shall avoid engaging in any activity which is incompatible with their professional status. Whilst members of the Society are free to engage in controversy, no member shall cast doubt on the professional competence of another without good cause.

4.3.4 Professional Competence and Integrity

- (i) Members shall seek to upgrade their professional knowledge and skill and shall maintain awareness of technological developments, procedures and standards which are relevant to their field, and shall encourage their colleagues to do likewise.
- (ii) Members shall seek to conform to recognised good practice including quality standards which are in their judgement relevant,

and shall encourage their colleagues to do likewise.

- (iii) Members shall only offer to do work or provide service which is within their professional competence and shall not lay claim to any level of competence which they do not possess.
- (iv) Members shall accept professional responsibility for work in their name, and any professional assessment which they are asked to give shall be objective and reliable.
- (v) Members should set out in writing any conflict, potential or actual, with the interests of the client or employer.

4.3.5 Disciplinary Procedures

A member is expected to act at all times in a manner likely to be judged by informed, respected, and experienced peers in possession of all the facts as the most ethical way to act in the circumstances. This code sets out certain basic principles that are intended to help members maintain the highest standards of professional conduct. Should a case arise where a member is believed to have wilfully acted in a manner which violates these principles then the disciplinary and appeal procedures set out in Rules 36 & 37 of the Society shall apply.

5. Optional Accreditation

Two types of professional accreditation are available to members who qualify:

- Graduate Statistician (GStat)
- Accredited Statistician (AStat).

The qualification of Graduate Statistician indicates that the holder has recently completed a course of study equivalent to a pass degree with a major in Statistics.

The qualification of Accredited Statistician indicates that the holder has a sound knowledge of Statistics at an advanced level, and has applied that knowledge competently and ethically through practice for several years.

Holders of the qualification must agree to follow the Society's Code of Conduct. It is expected that Accredited Statisticians will continue to keep abreast of new developments in Statistics through appropriate professional development activities.

5.1 Eligibility

Who may apply

A financial member of the SSAI may apply to the Council to become a Graduate Statistician or an Accredited Statistician. These qualifications are available as options to members, in addition to membership of SSAI.

Post-nominal letters

A financial member with the qualification of Accredited Statistician may use the abbreviation AStat after his or her name (for example: Karl Pearson, AStat). A financial member with the qualification of Graduate Statistician may use the abbreviation GStat.

Organisational structures

5.2 Accreditation Committee

There shall be an Accreditation Committee to make recommendations to Council about applications for accreditation, and about the accreditation processes. The Committee is responsible to Council, reporting to Council at least once a year.

5.2.1 Terms of Reference

- (i) to assess applications for the qualifications of Graduate Statistician and Accredited Statistician according to the requirements for qualification as stated below;
- (ii) to make recommendations to Council on applications for accreditation;
- (iii) to assess applications from Universities for accreditation of specified degree programs according to the requirements for qualification as stated below;
- (iv) to make recommendations to Council on such applications for accreditation;
- (v) to make recommendations to Council about the accreditation process, and to produce guidelines on the process for Council's consideration or as requested by Council;
- (vi) to provide feedback to universities and other interested bodies as requested by Council;
- (vii) to provide a proforma for applications.

5.2.2 Composition of the Committee

- (i) After consulting with the Chair of the Accreditation Committee the Central Council will determine the size of the Committee for the following year at the Annual General Meeting of the Council. The members are to be appointed by Council from applications obtained by advertisement in the Newsletter or from members proposed by the Nominating Committee of Council. The Committee should be as representative as possible of the Branches and interests of the Society, the statistical profession and of areas of statistical expertise. Appointments will normally hold the qualification of Accredited Statistician and must be members of SSAI.
- (ii) Committee members normally will serve for three years. The Chair will normally have served for at least one year, not necessarily immediately before appointment to Chair, as a Committee member. The Chair will be elected annually by the Committee with the appointment ratified by Council. Continuous service on the Committee, as member or Chair, will normally not exceed four years.
- (iii) The appointments will normally be made at the Annual General Meeting

(AGM) of the Council, with the call for applications being made at least two months before the Council AGM. Appointments to occasional vacancies will be made by Council on recommendations from the Executive after calling for nominations. If an election by Council is necessary for filling an occasional vacancy, it will be conducted by electronic or postal vote.

- (iv) The Committee Chair will be ex-officio a member of Council.
 - (iv) For a particular application the Committee will have the authority to consult non-committee members if it wishes to augment its knowledge of a particular area of statistical work whilst at all times ensuring appropriate confidentiality is maintained.

Requirements for qualification

5.3 Graduate Statistician

The Graduate Statistician (GStat) qualification requires an educational achievement only.

5.3.1 Education requirement

Holders of the qualification of Graduate Statistician shall meet at least the following educational requirements, provided no more than eight years has elapsed since the award of the degree or equivalent on which the application is based:

1. A pass degree from an Australian university, or equivalent qualification.
2. A minimum of 25% of a year's study in Statistics in total at second year level, and a minimum of 50% of a year's study in Statistics at third year level.
3. The applicant holds a four year Honours degree in Statistics, or the applicant has achieved a minimum average grade of 65% (that is, a credit average or equivalent) in their Statistical major at third year level or in the Statistics postgraduate coursework in the degree that forms the basis of their application.
4. Units involving statistical inference, data analysis, statistical communication skills and the use of a statistical package.
5. Several units covering material from the following list: probability and distribution theory, linear models, design of experiments, sampling methods, multivariate analysis, analysis of categorical data, time series, survival analysis, statistical consulting, statistical graphics, databases.

5.3.2 Supporting documentation

- a. Applicants who have completed programs that have been assessed by the Statistical Society of Australia as meeting the breadth requirements for GStat status will only need to verify that they have satisfied criterion 3. Other applicants must provide copies of Academic Transcripts and details of the statistical courses they have studied, years and institutions, including a listing of their second and third year level and Honours Statistics subjects/units, and any Statistics coursework in higher or postgraduate degrees, if such degrees form part of the application. The applicant should supply details of the content of courses in the application. In certain cases, the Accreditation Committee may require further information about course content from the degree-granting institution.

Notes:

- a. Where a substantial part of an honours year consists of a research thesis, the applicant should include a statement from the awarding university of the proportion of the thesis that is statistical. In such circumstances, the Accreditation Committee may require a copy of the thesis to be produced.
- b. Graduate Diplomas in Statistics, depending on their origin, may satisfy the degree requirement under one or other of the above two categories. In deciding whether the course requirements above have been met, the Accreditation Committee shall judge the standard and level.
- c. It is expected that applicants be graduates. The Accreditation Committee shall judge whether this requirement is met in cases where there is no obviously equivalent Australian degree.

5.4 Accredited Statistician

The Accredited Statistician (AStat) qualification requires both appropriate educational qualifications and relevant practical experience.

5.4.1 Education

1. Holders of the qualification of Accredited Statistician shall meet at least the education requirement for the GStat (see 5.3.1).
2. Under exceptional circumstances, applicants may be accredited who do not satisfy the education requirement above, but who can demonstrate a breadth of knowledge and understanding of both theoretical and applied Statistics equivalent to at least the education requirement for GStat together with a first or second class Honours degree including an honours year with at least 50% statistical content.

5.4.2 Experience

The applicant needs to demonstrate an appropriate level of competence in the application of statistical methods. Here, *application* refers to the use of

statistical methods in connection with analysis and/or modelling and/or reporting of work in which the handling of real-world data is an important part. Theoretical work is not sufficient of itself; the emphasis is on application to data, not on research into the theory of statistics. This should not be taken to exclude work in which the primary focus is theoretical, as long as there is a part that can be regarded as application.

- a. Where the educational requirement is met through 1 of 5.4.1, a further six (6) years of practical experience is required.
- b. Where the educational requirement is met through 1 of 5.4.1 and the applicant has a first or second class Honours degree including an honours year with at least 50% statistical content, a further four (4) years only of practical experience is required.
- c. Where the educational requirement is met through 2 of 5.4.1, at least ten (10) years of practical experience is required.
- d. For at least three (3) years of the qualification period, applicants must have taken *responsibility* for the statistical content of their work.
- e. Practical experience is not limited to paid employment; it may occur in a range of forms of practical activity. The Accreditation Committee will consider any practical experience which the applicant believes to be relevant.
- f. In considering the evidence for experience, the Accreditation Committee will take into account the length of experience and the level of expertise involved, and may exercise discretion in considering what constitutes *evidence* of experience and expertise.
- g. Applicants who have undertaken study for higher or other postgraduate degrees in Statistics may count some of their years of study for these degrees, up to a maximum of two-thirds of the study, towards the experience qualification, provided it fits within the practical experience requirements.

Examples

The following list gives examples of types of experience which would be considered:

- Leading statistical projects requiring a significant amount of statistical analysis or modelling.
- Undertaking statistical analysis of data and reporting on the results.
- Having responsibility for the interpretation and presentation of statistical information.
- Designing statistical databases and reporting systems.
- Provision of professional advice and opinions on statistical issues.
- Carrying out and implementing research to develop new methods to solve significant applied statistical problems.
- Taking responsibility for the design and analysis of statistically-based surveys.
- Managing and taking responsibility for statistical quality in a Statistics section whose work falls in one or more of the above areas.

5.4.3 Responsibilities of AStat

An Accredited Statistician must agree to abide by the Society's Code of Conduct, which is given in Regulation 4.

5.4.4 Application Processes

All applications are to be treated in confidence.

Applications shall be made on the appropriate form.

It is the responsibility of the applicant to demonstrate that the requirements are met.

Applicants must provide evidence (such as a transcript or degree certificate) that they meet the *educational* requirement.

Applicants must provide details of up to five publications, reports or the like, demonstrating they meet the *experience* requirements. Copies of two of these should be made available. These materials should be in English.

Where confidentiality of reports may be an issue, the applicant should consult the Executive Officer. See also 5.4.5.

Applicants must provide the details of two referees willing to provide a confidential report. Their reports will be obtained by the Executive Officer of the Society. Both referees should be in a position to comment on the applicant's work from first-hand knowledge and at least one referee should be an Accredited Statistician or hold an equivalent qualification awarded by another professional statistical organization.

Where the applicant is not able to provide a referee who holds AStat or an equivalent qualification, the Accreditation Committee may at its discretion accept reports from another statistician of seniority in the profession. If referees are clients (using the word "clients" in the broadest sense of covering all possible recipients of a statistician's work) or professional colleagues who are not statisticians, they may be asked to describe their level of expertise in Statistics and why they are suitable referees for assessing the applicant's work. The Committee will not necessarily be limited to obtaining information from only the nominated referees. Further evidence may be required in some cases.

5.4.5 Confidentiality of applicant's evidence

Where confidentiality may be an issue regarding the submission of reports and similar material, the applicant should approach the Executive Officer of the Society for advice. The Accreditation Committee has established procedures for protecting confidentiality of reports should such restrictions inhibit presentation of evidence of practical experience. Applicants are then advised to:

- (i) ensure that they have permission for members of the Committee to review the material,
- (ii) enclose the material in its own sealed envelope before transmission to the SSAI Office, and
- (iii) nominate up to two members of the Committee who should not see the material.

Members of the Accreditation Committee selected to review the material then sign a non-disclosure agreement in relation to the documents they will review. No one else on the Committee will see the material.

5.5 Mutual exclusivity of GStat and AStat

The qualifications of Graduate Statistician and Accredited Statistician may not be held simultaneously.

5.6 Reciprocal Accreditation

Financial members of the SSA who have been awarded Professional Statistician (P.Stat) status by the American Statistical Association (ASA) or Chartered Statistician (C.Stat) status by the Royal Statistical Society (RSS) and whose professional accreditation is current, and members who have been awarded P.Stat status by the Statistical Society of Canada (SSC) within the past five years are automatically eligible to become an Accredited Statistician with the SSA.

5.7 Ratification

The Accreditation Committee is responsible to Council. Committee recommendations on applications for accreditation must be ratified by the Executive, on behalf of Council, who will either accept the Committee's recommendations or return them to the Committee for reconsideration. In the latter case, the Executive shall provide reasons for its request for reconsideration. Council shall notify all applicants of the outcome of their application. In the case of unsuccessful applications a copy of the Accreditation Committee's report will be sent to the applicant. In the case of successful applications Council shall also notify the relevant Branch.

5.8 Appeals

An appeal against an unsuccessful application for accreditation may only be made on the basis of procedural error. An applicant has four weeks from the date of receipt of notification of the unsuccessful application to lodge an appeal with the Society Secretary. The appeals will be considered by the Executive of the Society. Their decision will be final.

5.9 Maintenance of Accredited Qualification

Accredited Statisticians shall provide to the Accreditation Committee every five years, including any years of cessation of financial status, or membership of the Society, or accredited membership, a summary of their activities in that five years to demonstrate at least continuing

contact/involvement with Statistics and the practice of Statistics appropriate to them, plus the name of 1 referee to be contacted if desired. The Committee will discount temporary interruptions to employment, and parental leave.

Accredited qualification is suspended if an accredited member ceases to be a financial member of the Society, and is reinstated only on payment of all outstanding dues. The elapsed time of being deemed accredited, in terms of possible re-accreditation, is unchanged.

Accredited qualification is rescinded on cessation of membership of the Society, but restored on resumption of membership of the Society within five years of membership cessation. An accredited member may choose to terminate his/her accreditation qualification. The qualification may be reinstated at the discretion of the Committee and Council, subject to the maintenance requirement above.

5.10 Confidentiality

Applications and maintenance reports may be accessed by the Committee during considerations but are stored confidentially. Part or any of their contents may be released only with the consent of the member concerned. In the case of an appeal, the Executive of the Society may also access the papers relevant to the appeal.

5.11 Fees and Records

A fee shall accompany each application to the Accreditation Committee. Unsuccessful applicants shall receive a refund of part of this fee. The application fee for Accredited Statistician status shall be \$220, with \$50 refunded if the application is not successful. The application fee for Graduate Statistician status shall be \$66, with \$20 refunded if the application is not successful. The initial accreditation fee shall be made with the application. A fee shall accompany an appeal against an unsuccessful application. This fee shall be equal to half the amount of the refund as stated above. Accredited Statisticians shall pay an additional annual capitation of \$44. This extra annual capitation will apply in the next Branch financial year after the qualification is approved. The extra annual capitation fee for AStat shall be payable with ordinary subscription fees. Central Council shall inform Branches regularly which of their members are accredited. The part-time executive officer will help with all membership and record-keeping aspects, as well as publicity, providing assistance to Branches and accredited members as well as centrally.

5.12 Disciplinary Issues

Loss of accreditation other than by resignation, non-payment of SSAI fees or member's choice, is a disciplinary matter, covered by the current Constitution (as required by the Incorporation Act) in Rules 36 and 37.

6. Accreditation of degree programs

6.1 The Qualification

A University may apply to the Council to have a specified degree program accredited by the Society for a period of 3 years. Graduates who complete such a degree program in the specified years, who are members of the Society and who make application, are entitled to the qualification of Graduate Statistician, provided that graduates achieve a minimum average grade of 65% in their Statistical major at third year level or in their Statistical postgraduate coursework.

Accredited degree courses are entitled to include the following wording in their promotional and other material:

"Students who graduate from this degree program will, on joining the Statistical Society of Australia, be automatically entitled to accreditation as a Graduate Statistician, provided they have achieved a minimum average grade of 65% (that is, a credit average or equivalent)."

The University has an obligation to notify the Society if any material changes are made to the degree program during that period of 3 years. Accreditation may be withdrawn if the Society believes that the program no longer meets the required standard.

The Society recognizes that, as the discipline of statistics evolves with advances in technology, the core skills outlined may be gained by students in subjects or units taught by schools or departments not offering a major in statistics or a cognate discipline.

6.2 Requirements for Qualification

Degree programs which qualify for Accreditation shall meet the following requirements or be of equivalent standing:

1. All students should be required to undertake a minimum of 25% of a year's study in Statistics in total at second year level, and a minimum of 50% of a year's study in Statistics at third year level.
2. All students should be required to undertake units which involve statistical inference, data analysis, statistical communication skills and the use of a statistical package.
3. All students should be required to take several units covering material from the following list: probability and distribution theory, linear models, design of experiments, sampling methods, multivariate analysis, analysis of categorical data, time series, survival analysis, statistical consulting, statistical graphics, databases, statistical aspects of machine learning and data science. Applicants will be able to include courses that encompass a combination of statistical techniques with machine learning, computer science and data science as fulfilling part of the requirement under clause 6.2 of the "Accreditation of degree

programs”. “statistical aspects of machine learning and data science.

4. All students are required to have gained practical experience with (a) general programming concepts and (b) a programming language that facilitates statistical analysis (e.g. R, Python). This may be satisfied with specific coursework or through research related to their degree program.

Applications should include photocopies of the formal University documents which provide the detailed degree requirements and should, in a separate document, include the following information:

1. the percentage of Statistics which is compulsory at each year level of the program, with an identification of those subjects and their content,
2. the percentage of Statistics which is available for students to undertake at each level of the program,
3. the number of "points" in each subject and the total number of points required in each year of the program,
4. the staff available to teach in the program and their qualifications.

It is noted that in some cases, a degree program with a Major in Statistics may not be considered sufficient but an Honours degree from the same program might qualify.

6.3 Ratification

The Accreditation Committee is responsible to Council. Committee recommendations on applications for accreditation of degree programs must be ratified by the Executive, on behalf of Council, who will either accept the Committee's recommendations or return them to the Committee for reconsideration. In the latter case, the Executive shall provide reasons for its request for reconsideration. Council shall notify all applicants of the outcome of their application. In the case of unsuccessful applications a copy of the Accreditation Committee's report will be sent to the applicant. In the case of successful applications Council shall also notify the relevant Branch.

6.4 Appeals

An appeal against an unsuccessful application for accreditation may only be made on the basis of procedural error. An applicant has four weeks from the date of receipt of notification of the unsuccessful application to lodge an appeal with the Society Secretary. The appeals will be considered by the Executive of the Society. Their decision will be final.

6.5 Maintenance of Accredited Qualification

Universities with accredited degree programs shall re-apply to the Society every three years, by either completing a new application or by providing a summary of any changes made to the degree program since the previous accreditation.

6.6 Fees

A non-refundable application fee shall accompany each application for accreditation of a course. A fee shall also be payable for reaccreditation on the expiry of each three year period of accreditation. These fees shall be determined by the Executive Committee on the recommendation of the Accreditation Committee.

6.7 Conflict of Interest and Confidentiality

The Accreditation Committee has established procedures where the applying University may consider that there is a potential for conflict of interest. In such a case, the University may nominate up to two members of the Committee who should not evaluate the material.

Applications and maintenance reports may be accessed by the Committee during considerations but are stored confidentially. In the case of an appeal, the Executive of the Society may also access the papers relevant to the appeal.

7. The E.J.G. Pitman Prize

This prize is awarded for the most outstanding talk presented by a “young statistician” at an Australian Statistical Conference.

7.1 Rules of the Prize

The following rules apply:

- 7.1.1 Only members of the Statistical Society of Australia Inc. are eligible.
- 7.1.2 “Young Statistician” will mean a person enrolled for a degree who is studying either full-time or part-time without age limit, OR a person who graduated with a Bachelor's degree within the past five years, OR a person awarded a postgraduate degree within the past year.
- 7.1.3 The Prize is to be at a value determined by the Council from time to time. A certificate will also be presented to the winner.
- 7.1.4 A Prize Committee, consisting of members of the Society, will be appointed by Council after consultation with the Conference Convenor. Members of the Prize Committee will attend all eligible talks at the ASC and after discussion make a decision.

The Prize Committee's decision will be final.

7.1.5 If, in the opinion of the Prize Committee there are no candidates of sufficient merit then no prize will be awarded.

7.1.6 The E.J.G. Pitman Prize can be awarded at most once to any given person.

7.2 Criteria for the award of the E.J.G. Pitman prize

In awarding the Prize the Prize Committee will consider the following:

- (i) the motivation and setting of the general context,
- (ii) the organisation and structure of the talk,
- (iii) the originality of the substance of the talk,
- (iv) the presentation of the material and rapport with the audience.

8. Criteria and Processes for Honorary Life Membership and the Pitman Medal

8.1 For the Pitman medal, achieving 'high distinction in Statistics' involves having made a major impact on the discipline of Statistics. Excellence in research and scholarship is a necessary but not sufficient component of this definition. The work should have enhanced the international standing of Australia in the discipline of Statistics. A recipient of the Pitman medal should normally be a member of the Society, but a case may be made for a nominee who is not currently a member of the Society.

8.2 For Honorary Life Membership the combination of service to the discipline of Statistics at both branch and national levels should have achieved a significant impact, distinction and/or been effective in change. Contributions to the profession may take a number of forms, but should be well established and supported by eminent members of the statistical or cognisant professions. A certificate plus citation are presented to Honorary Life Members.

8.3 The Awards Committee normally will meet every two years, in the November of the year preceding an Australian Statistical Conference (ASC). If a Council member wishes to make a nomination such nomination should normally be made by the November of the year preceding an ASC. The Committee should normally place their recommendations before Council at its February meeting. This does not prevent the Awards Committee from meeting at any other time it sees fit, nor does it prevent nominations from being made at other times if appropriate.

8.4 The recommendations from the Awards Committee to the Council

should be accompanied by a draft citation, and a recommendation should not normally go to Council unless at least four out of the five members of the Awards Committee vote in favour thereof.

Recommendations and draft citations shall be strictly confidential and available only to voting members of Council during discussion. As with the Awards Committee, minutes will not be kept of either discussion or vote and all material of the Council meeting relating to the nominations will be destroyed at the completion of the meeting. If more than one award (of any type) is proposed by the Awards Committee, then Council is to vote on each award.

- 8.5** Awards approved by Council will be announced in the Newsletter and presented at the next ASC.

9. Service Awards

A Society Service Award may be awarded to a Society member in recognition of sustained and significant service to the Society. There are no formal limits on the number or frequency of these awards, but they should be given only for extended periods of significant service. The Awards Committee will make recommendations for such an award to Council, and the processes will normally be as for the Pitman medal and Honorary Life Membership. Honorary Life Members are ineligible for Society Service Awards. A certificate is presented to the recipients of an award.
